

TITLE: FASTRAC – AGRA-GPS Ready 4000 Series

DATE: 09/11/18

REF NO. LP-054

JCB Landpower is pleased to introduce the AGRA-GPS ready option for the Fastrac 4000 Series.

This option provides the necessary wiring harness & brackets fitted from factory to allow aftermarket fitment of the AGRA-GPS bridge. This acts as a link between the Fastrac GPS ready steering system and a 3rd party GPS system (e.g. JD Greenstar).

The system offer a number of key benefits:

- Operators are able to take advantage of GPS system functionality to maximise productivity
- Integration with machine controls (e.g. activation of auto steer using joystick button)
- Increased residual machine values because the tractor is not tied to a specific GPS brand
- Easier fitment than the JCB Reichardt kit (148/00731).
- Reduced labour time for installation and calibration
- Stocking benefit to dealer - standardised GPS ready option
- Compatible with the following JD screens – 2600, 1800, 2630, 4640

The AGRA-GPS ready option can be selected on JDS using the following sales code:

130U404

This will need to be selected in addition to one of the following GPS ready T codes:

**130T401
130T402
130T403
130T404**

**130T409
130T410
130T411
130T417**

**130T418
130T419
130T431
130T434**

REF NO. LP-054

The AGRA-GPS bridge will be supplied separately by the manufacture along with the necessary calibration tool software.

www.agra-gps.com

Tel. +1 (780) 990-4052

For fitment of JD Greenstar, the customer will need to supply the following additional hardware:

- Receiver
- Screen
- Starfire bracket (Available from a John Deere dealer – p/n PF81190 or RE261512 depending on receiver)

An aftermarket AGRA-GPS ready kit is also planned for release in the near future. The sales code for this kit is to be confirmed in a later sales flash.
